Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

- 1 User opens the Electric Vehicle Charge & Range Analysis web application.
- 2 User uploads the EV dataset (CSV/Excel).
- 3 System processes the data (handles missing values, duplicates, encoding, normalization).
- 4 System analyzes the data to find charge time, range, efficiency, usage patterns, and risk factors.
- 5 Insights are visualized in the dashboard using charts, graphs, and reports for decision making.
